

### Wells Fargo 22<sup>nd</sup> Annual Utilities Symposium

New York | December 6, 2023

8-K December 06, 2023

#### **Forward Looking Statements**

During the course of this presentation, there will be forward-looking statements within the meaning of the "safe harbor" provisions of the Private Securities Litigation Reform Act of 1995. Forward-looking statements often address our expected future business and financial performance, and often contain words such as "expects," "anticipates," "intends," "plans," "believes," "seeks," or "will."

The information in this presentation is based upon our current expectations as of the date hereof unless otherwise noted. Our actual future business and financial performance may differ materially and adversely from our expectations expressed in any forward-looking statements. We undertake no obligation to revise or publicly update our forward-looking statements or this presentation for any reason. Although our expectations and beliefs are based on reasonable assumptions, actual results may differ materially. The factors that may affect our results are listed in certain of our press releases and disclosed in the Company's most recent Form 10-K and 10-Q along with other public filings with the SEC.

Data as of 12/31/2022

## NorthWestern's Combo-Advantage

#### Combination electric & natural gas provider in Montana & South Dakota

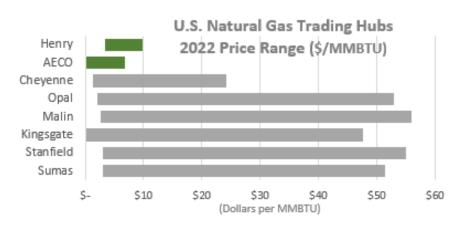

- Targeting best-in-class Customer Experience
- Opportunity to invest in critical Capacity expansion (supply & transmission)
- Continued Grid Evolution to improve resiliency and enhance wildfire mitigation efforts
- Transforming our Digital Platform to enhance cyber-security & technology solutions

#### ✓ Natural hedge between natural gas to electric conversions

Primarily residential with commercial & industrial customers across many industries

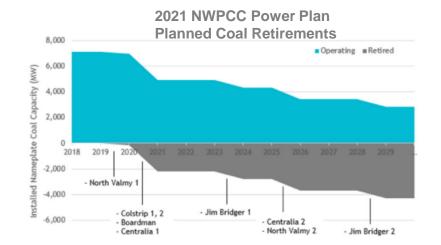

## Natural Gas

- Investment in production\*, transmission & distribution
- Extreme winters necessitate economical gas heating
- Energy Choice (Ban the Ban) laws in MT & SD
- Access to low & less volatile natural gas pricing
  - AECO & Henry Hub (Ventura)

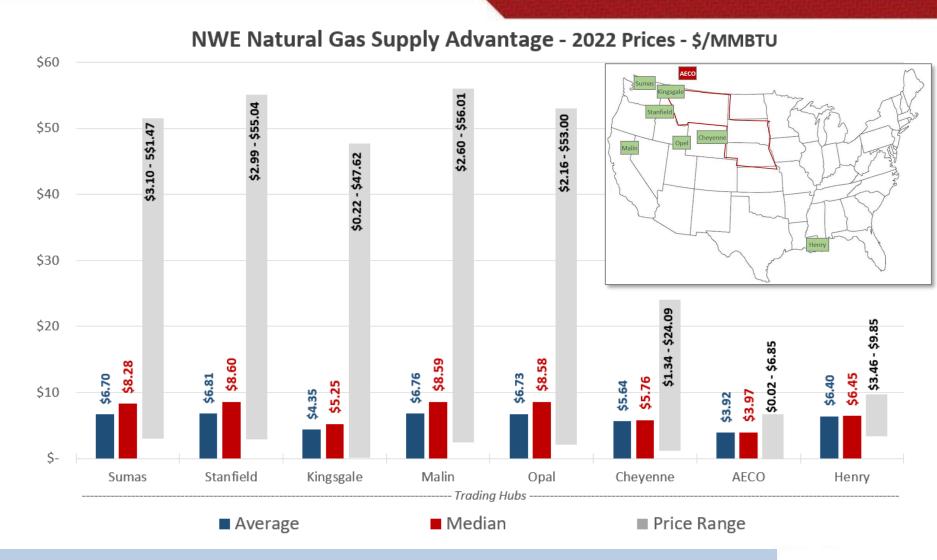

- Investment in generation, transmission & distribution
- Highly diverse & carbon-free electric supply portfolio
- Broad footprint spanning multiple reliability & transmission regions / organizations
- Growing regional capacity deficit requiring investment

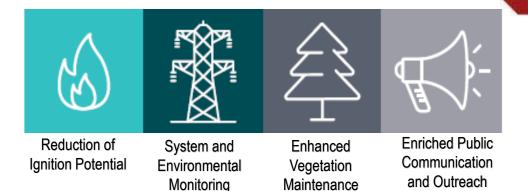

## Natural Gas LDC - AECO Advantage to Customers

NWE has access to some of the lowest and stable natural gas prices in the nation, through the Alberta Energy Company (AECO) trading hub.

Source: S&P Global

# Montana Enhanced Wildfire Mitigation Plan

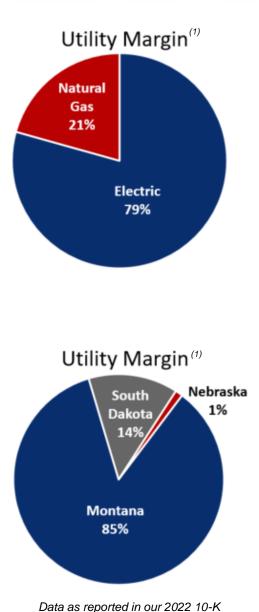

- ✓ Filed in August 2022 with Montana general rate review
  - Approved settlement provides for deferral of fire mitigation operating expense of up to approximately \$95 million over a five- year period for future recovery
- Key elements of the plan, driven by risk analysis include:
  - Situational Awareness
  - Operational Practice
  - ✓ System Preparedness
  - Vegetation Management
  - Public Communication

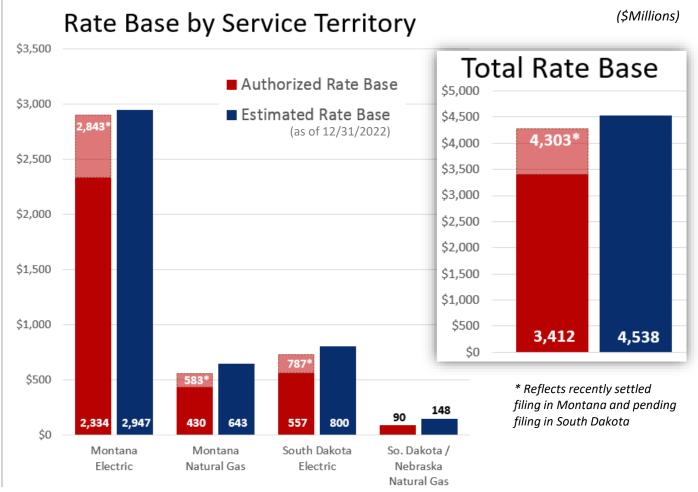

Our operational practice includes situationally performing power shutdowns and adjusting system operating protocols during periods of heightened wildfire risk. Power shutdown considerations include environmental conditions, system performance and mitigating any potential impacts of an outage to customers and emergency services.

## A Diversified Electric and Gas Utility

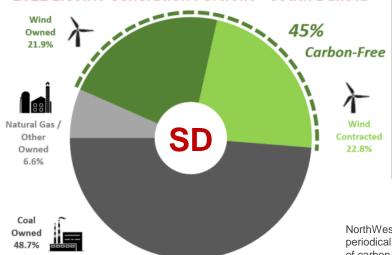

NorthWestern's '80/20' rules: Approximately 80% Electric and 80% Montana. Over \$4.5 billion of rate base investment to serve our customers

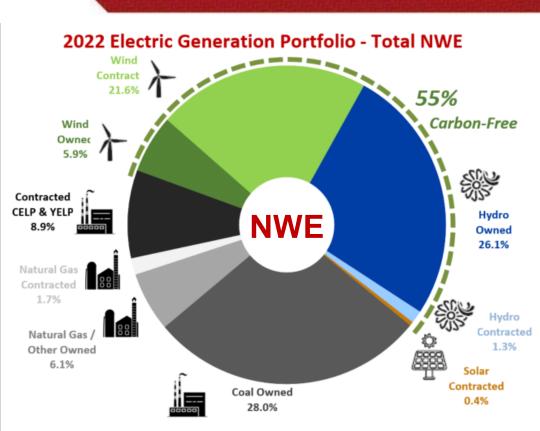

(1) Utility Margin is a non-GAAP Measure. See appendix for additional disclosure.

## Highly Carbon-Free Supply Portfolio

2022 Electric Generation Portfolio - Montana Wind Contracted 58% 21.39 Carbon-Free Wind Owned 2.4% Contracted MT CELP & YELP Hydro 10.9% Owned 31.9% Natural Gas Contracted 2.1% Hydro Contracted 1.6% Natural Gas / Other Owned Solar **Coal Owned** 5.9% Contracted 23.4% 0.5%

2022 Electric Generation Portfolio - South Dakota

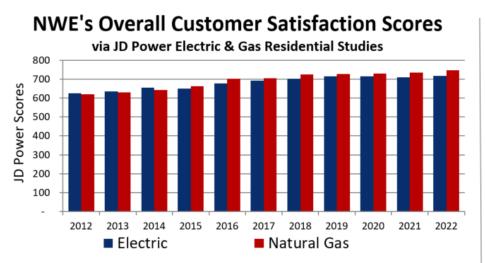

Based upon 2022 MWH's of owned and long-term contracted resources. Approximately 55% of our total company owned and contracted supply is carbon-free – better than the national average of ~40% (2022 eia.gov table 7.2b)

NorthWestern does not own all the renewable energy certificates (RECs) generated by contracted wind, and periodically sells its own RECs with proceeds benefiting retail customers. Accordingly, we cannot represent that 100% of carbon-free energy in the portfolio was delivered to our customers.

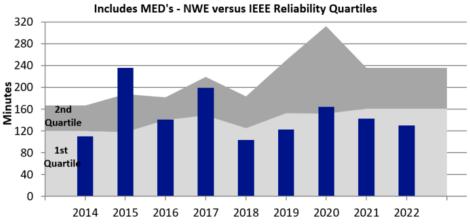

Contracted energy from Colstrip Energy Limited Partners (CELP), Yellowstone Energy Limited Partners (YELP) as well as a majority of the contracted wind, hydro and solar are federally mandated Qualifying Facilities, as defined under the Public Utility Regulatory Policies Act of 1978 (PURPA).

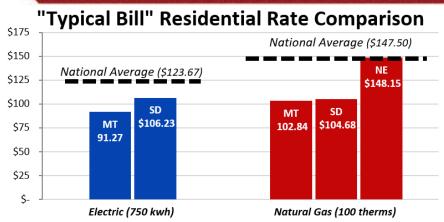

# **Strong Utility Foundation**

#### System Average Interruption Duration Index (SAIDI)

NWE rates as of 7/1/2022 (Electric) and 12/1/2022 (Natural Gas) Electric source: Edison Electric Institute Typical Bills and Average Rates Report, 7/1/22 Natural Gas source: US EIA - Monthly residential supply and delivery rates as of December 2022

#### Leaks per 100 Miles of Pipe

#### **Excluding Excavation Damages - 2022**

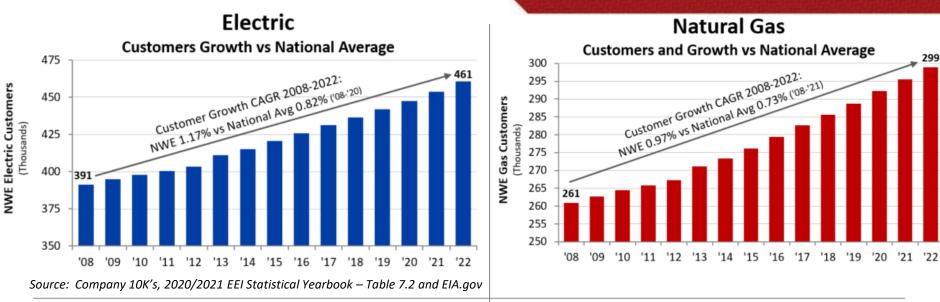

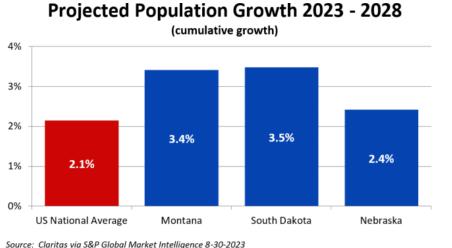

Note: AGA data is from 2022 survey based on 2021 data

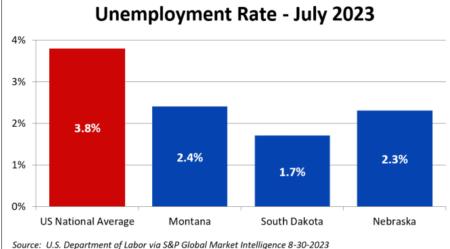

- Solid and generally improving JD Power Overall Customer Satisfaction Scores
- Residential electric and natural gas rates below national average \*
- Solid electric system reliability
- Better than average natural gas leaks per mile

\* NE bills temporarily impacted by ongoing recovery of the February 2021 prolonged cold weather event that resulted in extreme price excursion for purchased power and natural gas.

# Solid Economic Indicators

- Customer growth rates historically exceed National Averages.
- Projected population growth in our service territories in-line or better than the National Average.

These eight publications provide valuable insight into NorthWestern Energy's Environmental, Social and Governance (ESG) Sustainability practices. Sustainability Report includes Sustainability Accounting Standards Board (SASB) and Task Force on Climate-Related Financial Disclosures (TCFD) aligned reporting.

# **Best Practices Governance**

**Diverse Leadership** 

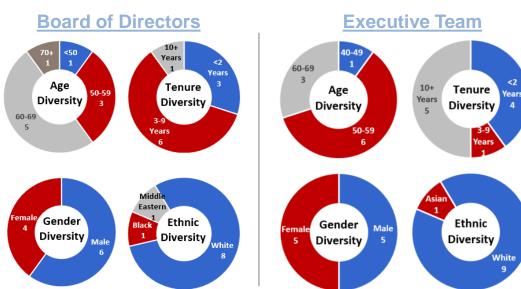

**5** Best Score Among 50 Publicly Traded North American Utility and Power Companies by Moody's Investment Services for Best Governance Practices

#### **Recent Governance Recognition**

#### America's Most Responsible Companies

Recognized by **Newsweek** as one of the most responsible companies in 2023. One of only eleven EEI member utilities selected.

# 

#### America's Greatest Workplaces

Recognized by *Newsweek* as one of America's greatest workplaces in 2023.

#### 20 / 20 – Women on Boards

Recognized for gender diversity on its board of directors by 2022 Women on Boards. Currently four of the company's ten directors are female.

#### **Edison Electric Institute Emergency Response Award recipient**

Recognized for our restoration response for both the May 2022 derecho in South Dakota and the historic flooding in Montana & Yellowstone National Park in June 2022.

# Financial & Regulatory Update

## Strong Outlook & 2024 Earnings Guidance

## Non-GAAP EPS guidance

2023: \$3.00 - \$3.10 2024: \$3.42 - \$3.62

#### **Long-term (5 Year) expected growth rates**

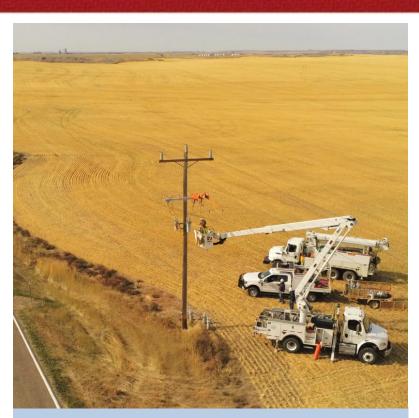

- EPS growth of <u>4% to 6%</u> (from 3% to 6%) from 2022 base year of \$3.18 Non-GAAP
- Rate base growth of <u>4% 6%</u> (from 4% to 5%) from 2022 base year \$4.54 billion.
- Continued focus on earned returns driven by financial and operational execution

#### No equity expected to fund the current 5-year capital plan

- \$510 million capital plan for 2023 on target
- \$2.4 billion infrastructure investment plan for '23–'27 sized to be self-funded
- Any equity needs would be driven by opportunities <u>incremental</u> to the plan

#### Targeting FFO > 14% by end of 2024 and beyond

 Annual dividend growth expected to be below earnings growth until we return to a payout ratio within our targeted 60% to 70%

This guidance range is based upon, but not limited to, the following major assumptions:

- Final approval of all material aspects of the Montana general rate review settlement agreement
- Constructive outcomes in our current South Dakota rate review and regulatory proceedings
- Normal weather in our service territories
- An effective income tax rate of approximately 4%-5% for 2023 and 12%-14% for 2024; and
- Diluted average shares outstanding of approximately 60.4 million in 2023 and 61.3 million in 2024.

# Earnings Bridge to 2024

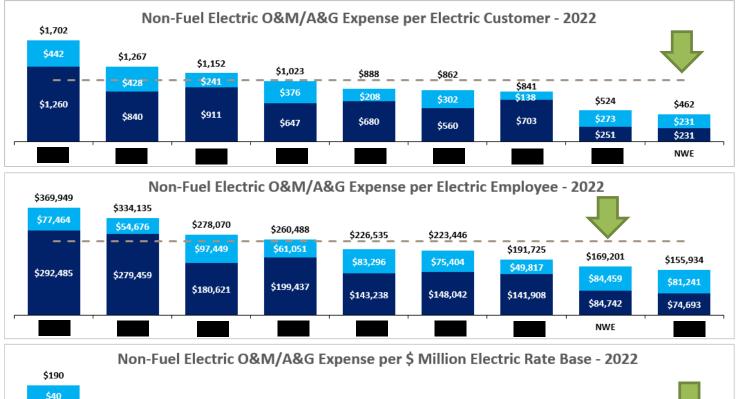

See Detailed Earnings Bridge to 2024 slide in the Appendix for additional information

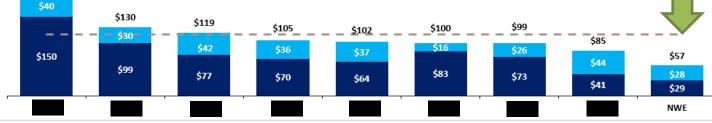

This guidance range is based upon, but not limited to, the following major assumptions:

- Final approval of all material aspects of the Montana general rate review settlement agreement
- Constructive outcomes in our current South Dakota rate review and regulatory proceedings
- Normal weather in our service territories
- An effective income tax rate of approximately 4%-5% for 2023 and 12%-
- for 2023 and 12%-14% for 2024; and
- Diluted average shares outstanding of approximately 60.4 million in 2023 and 61.3 million in 2024.

## **Disciplined Electric O&M Program**

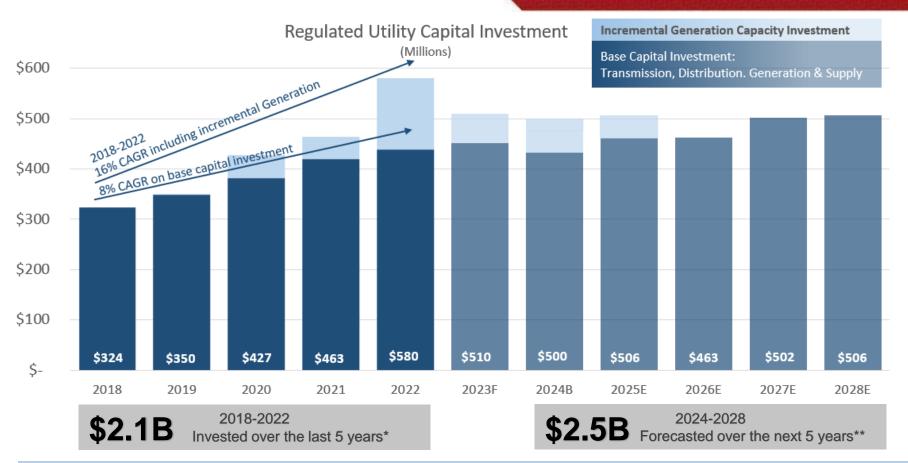

Source: FERC Form 1 Reports - 2022 expenses and company filings through S&P Global IQ Electric Non-Fuel O&M excludes fuel and steam costs for power generation, water costs for hydro operations and purchased power cost unless identified in company disclosures, electric employees are allocated by electric rate base weighting to total rate base Per Customer... Per Employee... Per Rate Base...

NorthWestern has best-in-class expense efficiency among our regional peers.

A&G Expense
O&M Expense

# Track Record of Growing Capital Investment

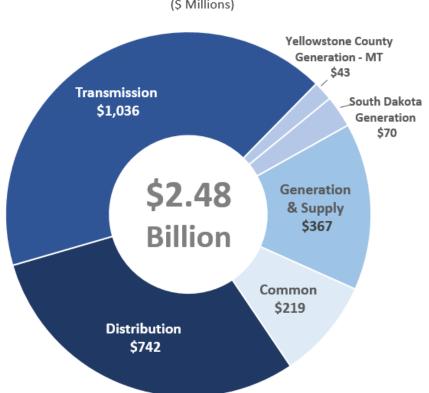

This critical capital investment addresses generation and transmission capacity constraints, grid modernization and renewable energy integration. More than two-thirds of the investment is related to distribution and transmission on both the electric and natural gas systems.

payable. Delivering a Bright Future

\* Historical Capital Investment includes property, plant and equipment additions from our cash flow statement and capital expenditures included in accounts payable. \*\* See *Regulated Utility Five-Year Capital Forecast* slide in the appendix for additional detail.

# Highly Executable Pipeline of Capital Investment

2024-2028 Capital Investment (\$ Millions)

#### Capital Opportunities <u>not</u> currently included in the Projections

#### **FERC Transmission**

- Incremental generating capacity (subject to successful resource procurement bids)
- Qualifying Facility and / or Power Purchase Agreement buyouts

 Electrification supporting economic development

Nearly \$2.5 billion of low-risk capital investment forecasted over the next five years is expected to drive annualized rate base growth of approximately 4% - 6%. We expect to finance this capital with a combination of cash flows from operations and first mortgage bonds (equity funding is not anticipated).

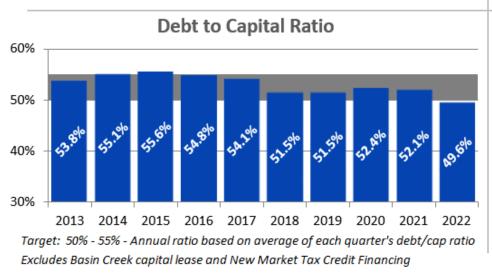

Financing plans are subject to change and intended to protect our current credit ratings (targeting a 14%-15% FFO to Debt ratio).

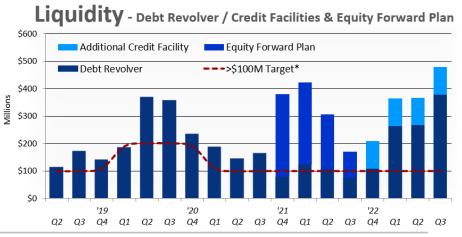

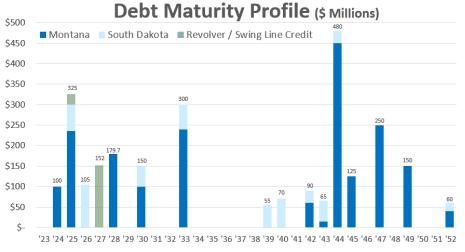

Credit Ratings							
	<u>Fitch Moody's S8</u>						
Senior Secured Rating	A-	A3	A-				
Senior Unsecured Rating	BBB+	Baa2	BBB				
Commerical Paper	F3	Prime-2	A-2				
Outlook	Stable	Stable	Stable				

A security rating is not a recommendation to buy, sell or hold securities. Such ratings may be subject to revisions or withdrawl at any time by the credit rating agency and each rating should be evaluated independently of any other rating.

Investment grade credit ratings, liquidity significantly greater than our \$100 million target, debt to capitalization at the bottom our targeted 50%-55% range and a manageable schedule of debt maturities.

#### Unanimous approval from the Montana Public Service Commission of a constructive multi-party settlement

## South Dakota Rate Review

Request to update our rates to reflect the current cost to provide safe and reliable service to our customers

- First rate review since 2015. Seeking recovery of nearly 30 percent of rate base that is not included in South Dakota electric rates today.
- Requested base rate increase driven by more than \$267 million invested in South Dakota critical electric infrastructure, while keeping operating costs below the rate of inflation, since our last electric rate review.

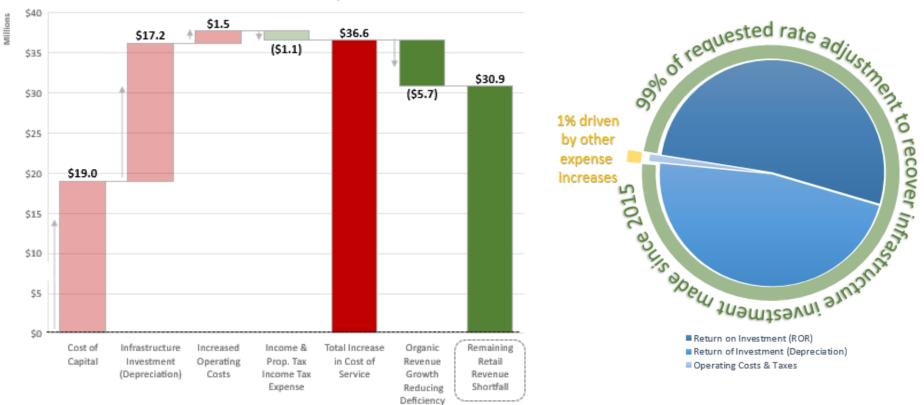

Category	Current Rates
Test Year (Trailing Twelve Months)	Sep. 30, 2014

# Supply Update

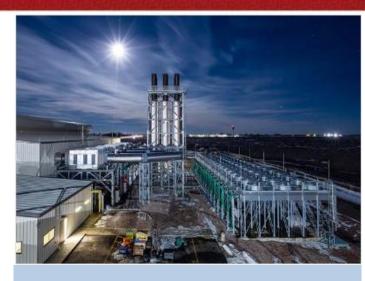

#### ✓ Montana:

- 175 MW Yellowstone County Generating Station Construction began in April 2022 with costs of approximately \$275 million with \$217.5 million invested to date (thru 9/30/23). Current schedule anticipates commercial operation during third quarter 2024\*
- Anticipated acquisition of 222 MW of Colstrip capacity from Avista on 12/31/2025 for \$0 transfer price.

#### Integrated Resource Plans

**South Dakota:** Filed in September 2022, the plan identifies 43 megawatts as retire and replace candidates.

**Montana:** Filed in April 2023, the plan evaluates alternatives to reliably and affordably meet customer needs over a 20 year horizon. With the anticipated addition of YCGS and Avista's transfer of Colstrip, the plan anticipates resource adequacy into 2029.

The recently completed 58-megawatt Bob Glanzer Generating Station in Huron, South Dakota, provides on-demand resources to support the variability of wind and solar projects coming onto our system and the grid in our region and help serve our customers during extended periods of peak demand.

\* On October 21, 2021, the Montana Environmental Information Center (MEIC) and the Sierra Club filed a lawsuit in Montana State Court, against the Montana Department of Environmental Quality (MDEQ) and NorthWestern, alleging that the environmental analysis conducted by MDEQ prior to issuance of the Yellowstone County Generating Station's air quality construction permit was inadequate. The Montana District Court judge held oral argument on June 20, 2022. On April 4, 2023, the Montana District Court issued an order finding MDEQ's environmental analysis was deficient in not addressing exterior lighting and greenhouse gases. The Court remanded it back to MDEQ to address the deficiencies and vacated the air quality permit pending that remand. As a result of the vacatur of the permit, we were required to stop construction. On April 14, 2023, following entry of final judgment, we filed a Motion to Stay the order vacating the air quality permit pending appeal. On April 17, 2023, we filed a notice of appeal with the Montana Supreme Court. On June 8, 2023 the Montana District Court Judge issued a Stay Pending Appeal allowing construction to resume. This lawsuit, as well as additional legal challenges related to the Yellowstone County Generating Station, could delay the project timing and increase costs. At this time, we still expect the plan to be operational in the second half of 2024.

## Conclusion

Best Practices Corporate Governance Attractive Future Growth Prospects Improving Earnings & Cash Flows (rate reviews pending)

# Delivering a **bright future**

## **Regulated Utility Five-Year Capital Forecast**

#### Regulated Utility Capital Forecast

Distribution and Transmission Modernization and Maintenance -

The primary goals of our infrastructure investments are to reverse the trend in aging infrastructure, maintain reliability. proactively manage safety, build capacity into the system, and prepare our network for the adoption of new technologies. We are taking a proactive and pragmatic approach to replacing these assets while also evaluating the implementation of additional technologies to prepare the overall system for smart grid applications. Beginning in 2021, and continuing through 2025, we are installing automated metering infrastructure in Montana at a total cost of approximately \$105 million, with approximately \$38 million remaining in the 2024 – 2025 capital forecast.

	20	24B	<u>2025E</u>	2026E	<u>2027E</u>	2028E	T	otal '24-'28
Base Capex	\$	432	\$ 461	\$ 463	\$ 501	\$ 506	\$	2,364
New Generation Build		68	45	-	-	-		113
Total	\$	500	\$ 506	\$ 463	\$ 501	\$ 506	\$	2,477

## **Detailed Earnings Bridge to 2024**

	2024 Guid	ance	Bridge
	Low		High
2023 Non-GAAP Diluted EPS - Midpoint of Guidance	\$3.05		\$3.05
2024 Earnings Drivers (after-tax and per share)			
Utility Margin	1.21	-	1.30
OG&A expense	(0.09)	-	(0.05)
Property & other tax expense	(0.09)	-	(0.08)
Depreciation expense	(0.26)	-	(0.26)
Interest expense	(0.24)	-	(0.21)
Other income	0.05	-	0.06
Incremental tax impact*	(0.16)	-	(0.14)
Subtotal of anticipated changes	0.42	-	0.62
2024 EPS guidance prior to equity dilution	\$3.47		\$3.67
Dilution from shares issued during 2023	(0.05)	-	(0.05)
EPS guidance <u>after</u> equity dilution	\$3.42		\$3.62
2024 Non-GAAP Adjusted Diluted EPS (Midpoint)	ę	3.52	
2024 potential dividend payout ratio	76.1%		71.9%
2024 Expected dividend	\$2.60		\$2.60

\* 2024 earnings drivers shown above are calculated using a 25.3% effective tax rate. The incremental tax impact line included above reflects anticipated changes in discrete tax items (such as amortization of removals, tax repairs and meter deductions, production tax credits, and other permanent or flow-through items) from 2023 non-GAAP earnings to 2024 guidance.

This guidance range is based upon, but not limited to, the following major assumptions:

- Final approval of all material aspects of the Montana general rate review settlement agreement
- Constructive outcomes in our current South Dakota rate review and regulatory proceedings
- Normal weather in our service territories
- An effective income tax rate of
- approximately 4%-5% for 2023 and 12%-14% for 2024; and
- Diluted average shares outstanding of approximately 60.4 million in 2023 and 61.3 million in 2024.

## **NWE Rate Base and Earnings Profile**

				1				
Estimate as of 12/31/2022				Y	ear-end			
		Au	uthorized	E	stimated	Authorized	Authorized	
	Implementation	Ra	ate Base	Ra	te Base	Overall Rate	Return on	Authorized
Jurisdiction and Service	Date	(r	millions)	I)	millions)	of Return	Equity	Equity Level
Montana electric delivery and production (1)	April 2019 (4)	\$	2,030.1	\$	2,675.8	6.92%	9.65%	49.38%
Montana - Colstrip Unit 4	April 2019	\$	304.0	\$	271.3	8.25%	10.00%	50.00%
Montana natural gas delivery and production (2)	September 2017 (4)	\$	430.2	\$	643.3	6.96%	9.55%	46.79%
Total Montana		\$	2,764.3	\$	3,590.4			
South Dakota electric (3)	December 2015	\$	557.3	\$	799.6	7.24%	n/a	n/a
South Dakota natural gas (3)	December 2011	\$	65.9	\$	97.8	7.80%	n/a	n/a
Total South Dakota		\$	623.2	\$	897.4			
Nebraska natural gas (3)	December 2007	\$	24.3	\$	49.9	8.49%	10.40%	n/a
Total NorthWestern Energy		\$	3,411.8	\$	4,537.7			

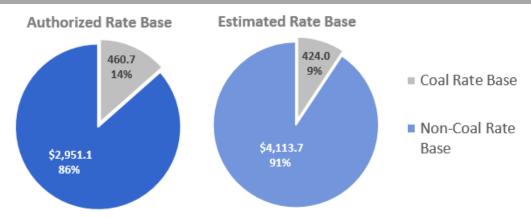

(1) The revenue requirement associated with the FERC regulated portion of Montana electric transmission and ancillary services are included as revenue credits to our MPSC jurisdictional customers. Therefore, we do not separately reflect FERC authorized rate base or authorized returns.

(2) The Montana gas revenue requirement includes a step down which approximates annual depletion of our natural gas production assets included in rate base.

(3) For those items marked as "n/a," the respective settlement and/or order was not specific as to these terms.

(4) On August 8, 2022, we filed a Montana electric and natural gas rate review filing (2021 test year) requesting an increase to our authorized rate base, return on equity, and equity level in our capital structure. We expect a final order regarding this rate review in 2023.

#### **Coal Generation Rate Base as a percentage of Total Rate Base**

Revenue from coal generation is not easily identifiable due to the use of bundled rates in South Dakota and other rate design and accounting considerations. However, NorthWestern is a fully regulated utility company for which rate base is the primary driver for earnings. The data to the left illustrates that NorthWestern only derives approximately 9 -14% of earnings from its jointly owned coal generation rate base.

## **2022 System Statistics**

#### **Owned Energy Supply**

Electric (MW)	МТ	SD	Total
Base load coal	222	211	433
Wind	51	80	131

Total	607,300	156,900	764,200
System (miles)	<u>MT</u>	<u>SD / NE</u>	<u>Total</u>
Electric	18,534	2,342	20,876
Natural gas	<i>5,099</i>	2,545	7,644
Total	23,633	4,887	28,520
	T	LouthW	Lator"

Note: Statistics above are as of 12/31/2022

(1) Nebraska is a natural gas only jurisdiction

(2) Dave Gates Generating Station (DGGS) in Montana is a 150 MW nameplate facility but consider it a 105 MW (60 MW FERC & 45MW MPSC jurisdictions) peaker

North **Delivering a Bright Future** 

# **Transmission System Update**

#### **Electric Transmission:**

- In June 2021, we joined the Western Energy Imbalance Market (WEIM). This real-time, within-hour energy market will provide the company's Montana customers with economically efficient energy to resolve imbalances and variations in load and generation on our Montana system.
- Continue planned retirements of generating resources in Montana in conjunction with increasing demand is placing more stress on the transmission system (two record peaks in the last three seasons). As a result, we are experiencing less available transmission capacity throughout the system.
- Continued investment is critical to address aging infrastructure, capacity concerns, reliability and compliance requirements.

#### Gas Transmission:

- Continued investment is critical to address aging infrastructure, capacity concerns, reliability and compliance (including the Pipeline and Hazardous Materials Safety Administration proposed rules).
- Three primary factors leading to the need for additional investment to address:
  - Overall reliability and capacity on the gas transmission system to withstand single large contingencies and to address the decline in on-system gas production;
  - The need to provide additional capacity for <u>existing</u> gas-fired electric generation (given expected growing dependence); and
  - The need to serve <u>new</u> gas-fired capacity generation in South Dakota.

Significant investment needs identified for transmission reliability, capacity and gas / electric interdependence.

#### **WEIM Participants**

# Rate Reviews

## South Dakota Rate Review

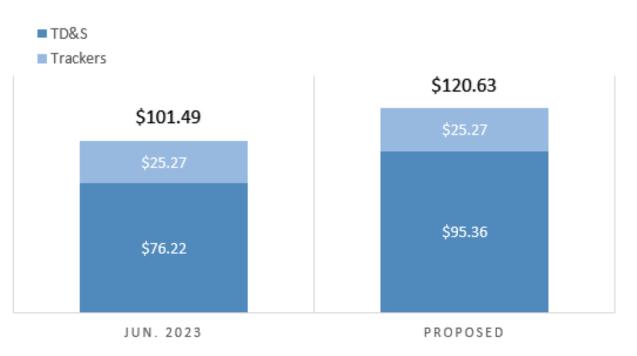

ppendix

Increase for an average residential electric customer that uses 750 kWh if our requested rate increase is approved.

#### NORTHWESTERN ENERGY SOUTH DAKOTA TYPICAL ELECTRIC BILL

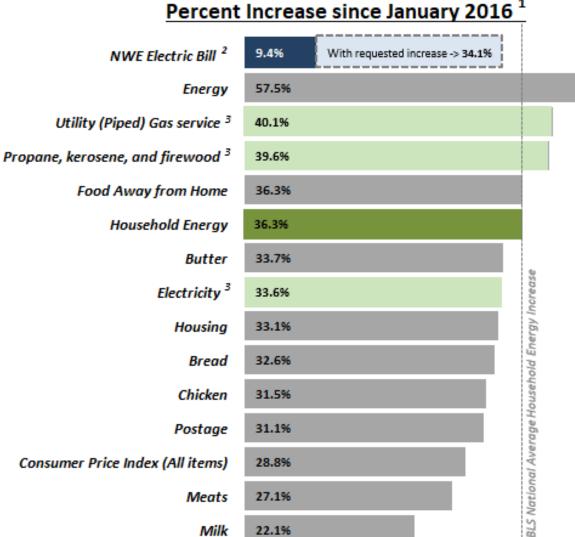

(750KWH MONTHLY BILL)

# South Dakota Rate Review

Percent Increase since January 2016<sup>1</sup>

Since our last rate adjustment, NorthWestern's typical residential electric customer bills have maintained a pace well below inflation.

This request, if granted in full, would still result in customer bills in line with inflation.

1. Based on U.S. Bureau of Labor Statistics Consumer Price Index for All Urban Consumers comparing January of 2016 to June of 2023.

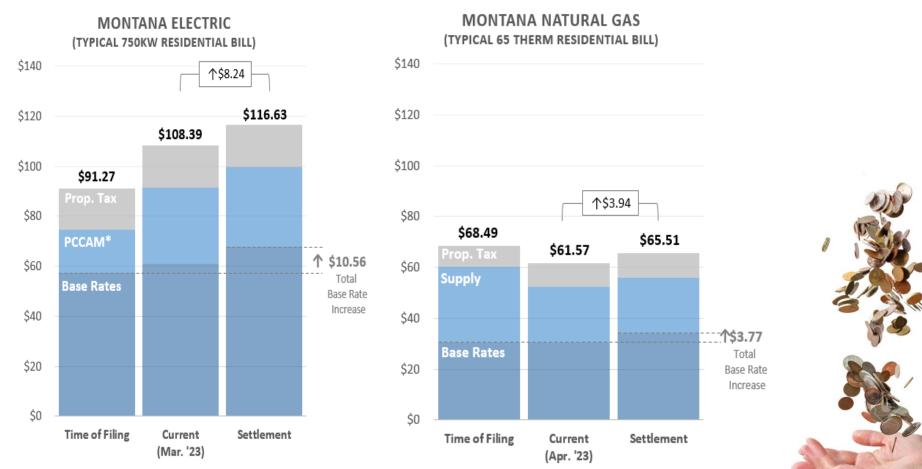

2. Based on a typical 750 k/wh monthly South Dakota residential electric bill - final rates implementation from 2014 Rate Case (January 2016 - June 2023).

3. Sub-component of Household Energy

### Reliable, Sustainable and still Affordable service for our customers.

While still significant – the resulting increase in customer bills, from current rates, amounts to pennies a day (Electric: \$8.24 per month or 27 cents per day | Natural Gas \$3.94 per month or 13 cents per day)

\* Including Deferred Supply Costs

# Colstrip Transfer Agreement

# **Colstrip Transaction Overview**

NorthWestern Energy executed an agreement with Avista Corporation (Exit Agreement) for the transfer of Avista's ownership interests in Colstrip Units 3 and 4.

- Effective date of transfer: December 31, 2025
- Generating capacity: 222 MW (bringing our total ownership to 444 MW)
- Transfer price: \$0.00

opendix

- NorthWestern will be responsible for operational and capital costs beginning January 1, 2026.
  - The agreement does not require approval by the Montana Public Service Commission (MPSC). We expect to work with the MPSC in a future docket for cost recovery in 2026.
  - NorthWestern will have the right to exercise Avista's vote with respect to capital expenditures<sup>1</sup> between now and 2025 with Avista responsible for its pro rata share<sup>2</sup>.
- Avista will retain its existing environmental and decommissioning obligations through life of plant.
- Under the Colstrip Ownership & Operating Agreement, each of the owners will have a 90-day period in which to evaluate the transaction between NorthWestern and Avista to determine whether to exercise their respective right of first refusal.
- We expect to file our Montana Integrated Resource Plan during the first quarter 2023. This transaction is expected to satisfy our capacity needs in Montana for at least the next 5 years.

<sup>1.</sup> Avista retains the vote related to remediation activities.

<sup>2.</sup> Avista bears its current project share (15%) costs through 2025, other than "Enhancement Work Costs" for which it bears a time-based pro-rate share Enhancement Work Costs are costs that are not performed on a least-costs basis or are intended to extend the life of the facility beyond 2025. See the Energy Agreement for additional detail.

# **Colstrip Transfer**

## Reliable

- Existing resource, ready to serve our Montana customers. Avoids lengthy planning, permitting and construction of a new facility that would stretch in-service beyond 2026.
- Reduces reliance on imported power and volatile markets, providing increased energy independence.
- In-state and on-system asset mitigating the transmission constraints we experience importing capacity.
- Adds critical long-duration, 24/7 on-demand generation necessary for balancing our existing portfolio.

# Affordable

- <u>222 MW of capacity with no upfront capital costs and</u> <u>stable operating costs going forward.</u>
  - $_{\odot}$  Equivalent new build would cost in excess of \$500 million.
  - Incremental operating costs are known and reasonable. Resulting variable generation costs represent a 90%+ discount to market prices incurred during December's polar vortex.
- In addition to no upfront capital, low and stably priced mine-mouth coal supply costs.

# Sustainable

- <u>We remain committed to our net zero goal by 2050.</u> This additional capacity, with a remaining life of up to 20 years, helps bridge the interim gap and will likely lead to less carbon post 2040.
- Yellowstone County Generating Station is potentially our last natural gas resource addition in Montana.
- Partners are committed to evaluate non-carbon long-duration alternative resources for the site.
- Keeps the existing plant open and retains its highly skilled jobs vital to the Colstrip community.
- Protects existing ownership interests with an ultimate goal of majority ownership of Unit 4.

NorthWestern Energy executed an agreement with Avista Corporation for the transfer of Avista's ownership interests in Colstrip Units 3 & 4.

- Effective date of transfer: 12/31/2025
- Generating capacity: 222 MW
- Transfer price: \$0.00

# Why Colstrip?

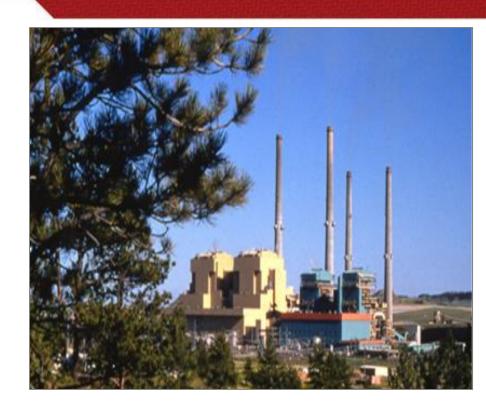

# **Reduces Risk**

- We are in a supply capacity crisis due to lack of resource adequacy, with approx. 40% of our customers' peak needs on the market. This transaction will reduce our need to import expensive capacity during critical times.
- Establishes clarity regarding operations past 2025 Washington state legislation deadline.
- Reduces PCCAM risk sharing for customers and shareholders.

# **Bill Headroom**

• Stable pricing reduces impact of market volatility and high energy prices on customers.

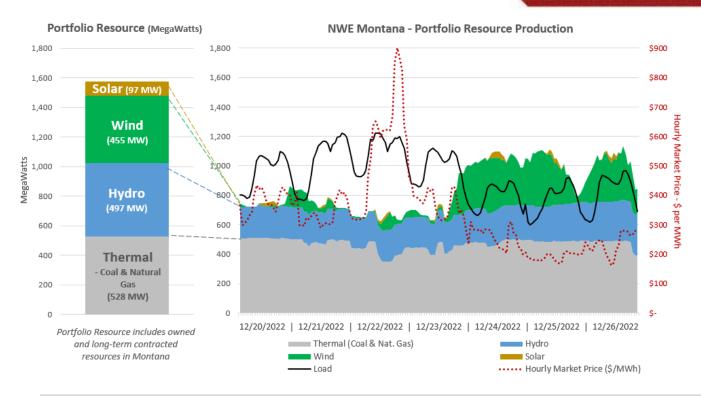

# Aligned with 'All of the Above' energy transition in Montana

- Supports our generating portfolio that is nearly 60% carbon-free today.
- Provides future opportunity at the site while supporting economic development in Montana.
- Agreement considers the appropriate balance of reliability, affordability and sustainability.

# December 2022 Polar Vortex

The chart illustrates the actual resource specific contribution of energy, the capacity deficit we faced, and the market price of power during the late December 2022 multi-day cold weather event in Montana. As a result of our capacity deficit, we were reliant upon the high and volatile power market a majority of the time to meet customer demand.

Estimated Cost Benefit of Existing 222 MW Colstrip Ownership vs. Market Purchases (Millions)										
	I	Existing 22	2 MW of Co	Colstrip Cost	Estimated Market Cost					
	MWh	Variable	+ Fixed	= <u>Total</u>	vs. Market	<u>Total</u>	Avg. \$ Per Mwh			
Dec. 20-26	35,580	\$0.8	\$1.4	\$2.2	(\$9.8)	\$12.0	\$336.14			
Dec. 21-23	15,467	\$0.4	\$0.5	\$0.9	(\$5.7)	\$6.6	\$427.64			
				·		·				

Colstrip costs significantly lower than market

# Facility Ownership Overview

# Appendix

Mitigating today's capacity crisis while creating a sustainable glide path to the cost-effective carbon-free technologies of tomorrow

	Current Colstrip Ownership Structure (megawatts)			Agreement th Units 3 & 4 er from	1	Executed Jan. 16, 2023 2026 Exit Agreement 111 MW of both Units 3 & 4 transfer from Avista → NorthWester			
	Unit 3	<u>Unit 4</u>	Unit 3	<u>Unit 4</u>		<u>Unit 3</u>	<u>Unit 4</u>		
Avista	111	111	111	111 —	$\neg$				
NorthWestern		222		222	\	> 111	333		
PacifiCorp	74	74	74	74		74	74		
Portland	148	148	148	148		148	148		
Puget	185	185 —							
Talen	222		→ 407	185		407	185		
Total	740	740	740	740		740	740		

NorthWestern is actively working with the other owners to resolve outstanding issues, including the associated pending legal proceedings. Additionally, the owners intend to pursue a mutually beneficial reallocation (swap) of megawatts between the two units that would ideally provide NorthWestern with a controlling (> 370 megawatts) share of Unit 4.

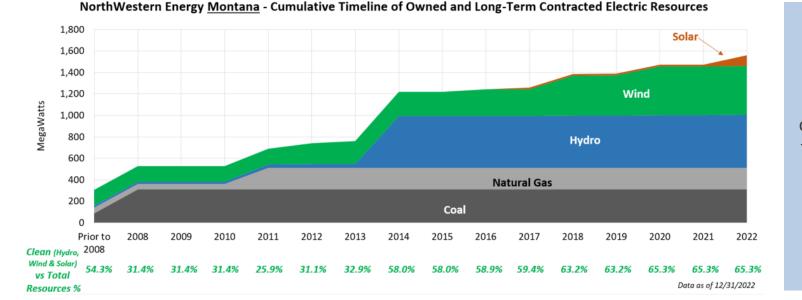

# **Timeline of Montana Generation Portfolio**

### Owned and Long-Term Resource Portfolio Timeline

Appendix

\* Federally mandated Qualifying Facilities contracts with CELP (Colstrip Energy Limited Partnership) and YELP (Yellowstone Energy Limited Partnership) expire in 2024 and 2028, respectively. \*\* Excludes 194 MW Kerr Dam which was purchased and subsequently transferred to the Salish & Kootenai Tribes in 2015.

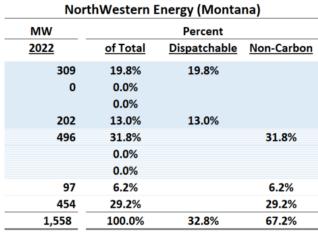

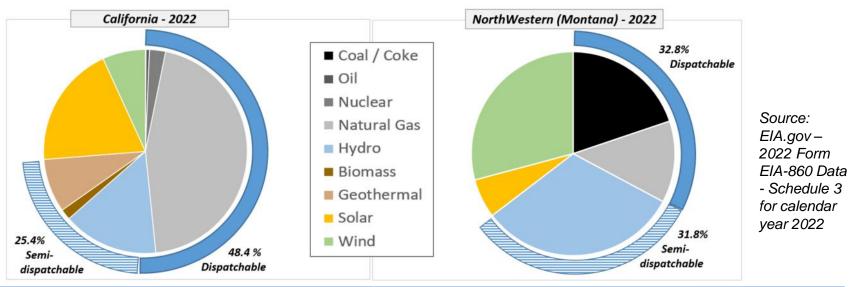

Since 2011, we have added approximately 870 MW, both owned and longterm contract, to our generation portfolio, all of which is from carbon-free resources.

# **Comparison of Installed Capacity**

Comparison of Installed Capacity (MW) - Dispatchability and Carbon Emitting

		Cali	fornia		North
	MW		Percent		MW
	2021	<u>of Total</u>	<b>Dispatchable</b>	Non-Carbon	 2022
Coal / Coke	90	0.1%	0.1%		309
Oil	492	0.5%	0.5%		0
Nuclear	2,323	2.6%	2.6%		
Natural Gas	41,102	45.2%	45.2%		202
Hydro	13,804	15.2%		15.2%	496
Biomass	1,555	1.7%		1.7%	
Geothermal	7,739	8.5%		8.5%	
Solar	17,685	19.4%		19.4%	97
Wind	6,206	6.8%		6.8%	454
	90,996	100.0%	48.4%	51.6%	1,558

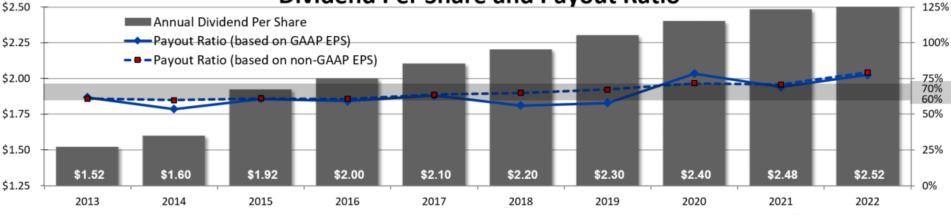

California is dealing with significant capacity issues DESPITE having a <u>greater amount of</u> <u>dispachable generation</u> and <u>fewer renewables</u> than NorthWestern Energy in Montana (as a percentage of the total).

# **EPS & Dividend History**

### Dividend Per Share and Payout Ratio

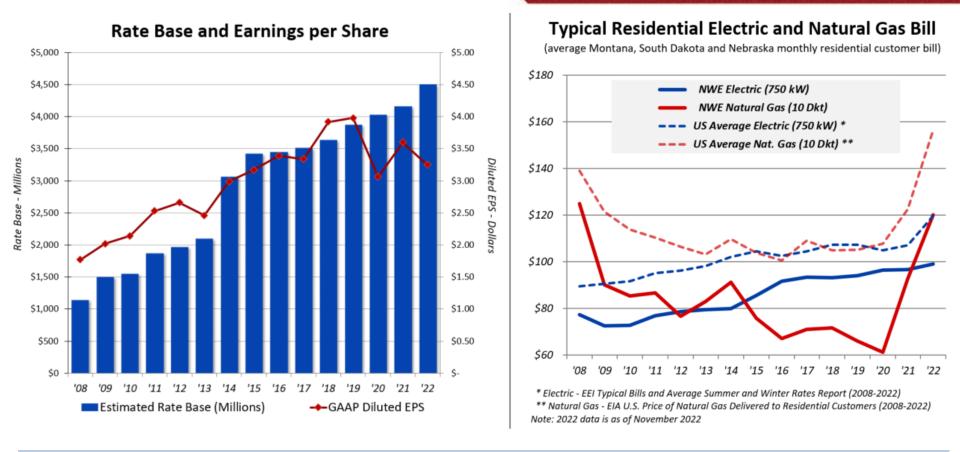

2013-2022 CAGR's: GAAP EPS: 3.1% See appendix for "Non-GAAP Financial Measures" Non-GAAP EPS: 2.7% - Divide

Dividend: 5.8%

# Investment for Our Customers' Benefit

Over the past decade we have been reintegrating our Montana energy supply portfolio and making additional investments across our entire service territory to enhance system safety, reliability and capacity.

We have made these enhancements with minimal impact to customers' bills while maintaining bills lower than the US average. As a result we have also been able to deliver solid earnings growth for our investors.

2008-2022 CAGRs	Estimated Rate Base:	10.4%	GAAP Diluted EPS:	4.4%
2008-2022 CAGRs	NWE typical electric bill:	1.8%	NWE typical natural gas bill:	(0.3%)
2008-2022 CAGRs	US average electric bill:	2.1%*	US average natural gas bill:	0.8%**

											l		

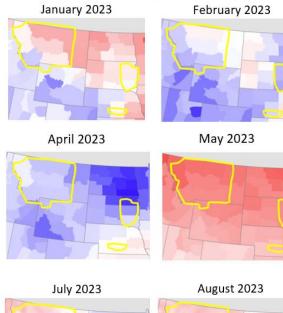

The adjusted non-GAAP measures presented in the table are being shown to reflect significant items that are non-recurring or a variance from normal weather. however they should not be considered a substitute for financial results and measures determined or calculated in accordance with GAAP.

(1) As a result of the adoption of Accounting Standard Update 2017-07 in March 2018, pension and other employee benefit expense is now disaggregated on the GAAP income statement with portions now recorded in both OG&A expense and Other (Expense) Income lines. To facilitate better understanding of trends in year-over-year comparisons, the non-GAAP adjustment above re-aggregates the expense in OG&A - as it was historically presented prior to the ASU 2017-07 (with no impact to net income or earnings per share).
(2) Utility Margin is a non-GAAP Measure See the slide titled "Explaining Utility Margin" for additional disclosure.

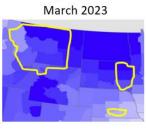

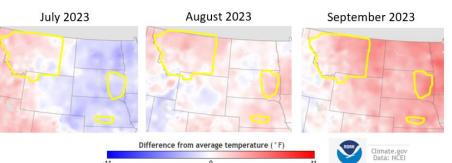

# Weather and Hydro Conditions

June 2023

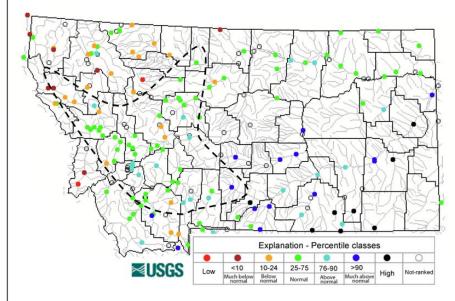

For Q3 – we estimated a \$0.9 million pre-tax detriment as compared to normal and a \$3.0 million detriment as compared to Q3 2022. YTD – we estimated a \$0.9 million pre-tax detriment as compared to normal and a \$3.6 million detriment as compared to 2022 YTD Q3.

Snow water equivalents generally in line with the 30-year medians.

(Missouri, Madison & Clark Fork Rivers and West Rosebud Creek basins)

(1) Decrease in revenues is primarily related to pass-through supply costs and non-cash regulatory amortizations.
(2) Utility Margin is a non-GAAP Measure See appendix slide titled "Explaining Utility Margin" for additional disclosure.

(dollars in millions)	Nine Months Ended September 3								
	2023	2022	Varian	се					
Electric	\$ 606.1	\$ 576.5	\$ 29.6	5.1%					
Natural Gas	138.0	137.0	1.0	0.7%					
Total Utility Margin (1)	\$ 744.1	\$ 713.5	\$ 30.6	4.3%					

### Increase in utility margin due to the following factors:

- \$ 23.4 Montana interim rates
- 8.3 Lower non-recoverable Montana electric supply costs
- 4.8 Montana property tax tracker collections
- 2.0 Higher electric retail volumes
- 1.8 Higher Montana natural gas transportation
- (1.0) Lower natural gas retail volumes
- (1.0) Lower transmission revenue (market conditions & lower transmission rates)
  - <u>(1.1)</u> Other
- \$ 37.2 Change in Utility Margin Impacting Net Income
- \$ (7.7) Lower property taxes recovered in revenue, offset in property & other tax expense
   (1.4) Lower operating expenses recovered in revenue, offset in O&M expense
   (0.6) Lower natural gas production taxes recovered in revenue, offset in property & other taxes
   3.1 Higher revenue from lower production tax credits, offset in income tax expense
- \$ (6.6) Change in Utility Margin Offset Within Net Income
- \$ 30.6 Increase in Utility Margin

(1) Utility Margin is a non-GAAP Measure See appendix slide titled "Explaining Utility Margin" for additional disclosure.

# Operating Expenses (YTD thru 3<sup>rd</sup> Quarter)

(dollars in millions)	Nine	ne Months Ended September 30,						
	2023	2022	Vari	ance				
Operating & maintenance	\$ 163.9	\$ 160.8	\$ 3.1	1.9%				
Administrative & general	94.1	87.0	\$10.2 7.1	8.2%				
Property and other taxes	131.0	140.2	(9.2)	(6.6)%				
Depreciation and depletion	157.8	145.7	12.1	8.3%				
Operating Expenses	\$ 546.8	\$ 533.7	\$ 13.1	2.5%				

the total change in labor and benefits, we have included the change in the nonservice cost component of our pension and other postretirement benefits, which is recorded within other income on our Condensed Consolidated Statements of Income. This change is offset within this table as it does not affect our operating expenses.

In order to present

### Increase in operating expenses due to the following factors:

- \$ 12.1 Higher depreciation due to plant additions
- 7.5 Higher labor and benefits <sup>(1)</sup>
  - 2.9 Higher expenses at our electric generation facilities
- 1.5 Higher insurance expense
- 1.4 Increase in uncollectible accounts
- 0.6 Higher cost of materials
- 0.2 Higher technology implementation and maintenance expenses
- (0.9) Lower other state and local tax expense
- 0.9 Other miscellaneous
- \$ 26.2 Change in Operating Expense Items <u>Impacting</u> Net Income
- \$ (7.7) Lower property taxes recovered in trackers, offset in revenue
- (3.2) Lower pension and other postretirement benefits, offset in other income

\$12.0 million increase in interest expenses was primarily due to higher borrowings and interest rates, partly offset by higher capitalization of AFUDC.

**\$1.1 million increase in other income, net** was primarily due to the prior year CREP penalty and higher capitalization of AFUDC, partly offset by an increase in the non-service component of pension expense

**\$11.8 million increase in income tax expense** was primarily due to higher pre-tax income, a reduction to previously claimed alternative minimum tax credit, lower plant and depreciation flow-through items and an accrual adjustment to an income tax return.

The adjusted non-GAAP measures presented in the table are being shown to reflect significant items that are nonrecurring or a variance from normal weather, however they should not be considered a substitute for financial results and measures determined or calculated in accordance with GAAP.

(1) As a result of the adoption of Accounting Standard Update 2017-07 in March 2018, pension and other employee benefit expense is now disaggregated on the GAAP income statement with portions now recorded in both OG&A expense and Other (Expense) Income lines. To facilitate better understanding of trends in year-over-year comparisons, the non-GAAP adjustment above re-aggregates the expense in OG&A - as it was historically presented prior to the ASU 2017-07 (with no impact to net income or earnings per share). (2) Utility Margin is a non-GAAP Measure See the slide titled "Explaining Utility Margin" for additional disclosure.

In 2017, the Montana legislature revised the statute regarding our recovery of electric supply costs. In response, the MPSC approved a new design for our electric tracker in 2018, effective July 1, 2017. The revised electric tracker, or PCCAM established a baseline of power supply costs and tracks the differences between the actual costs and revenues. Variances in supply costs above or below the baseline are allocated 90% to customers and 10% to shareholders, with an annual adjustment. From July 2017 to May 2019, the PCCAM also included a "deadband" which required us to absorb the variances within +/- \$4.1 million from the base, with 90% of the variance above or below the deadband collected from or refunded to customers. In 2019, the Montana legislature revised the statute effective May 7, 2019, prohibiting a deadband, allowing 100% recovery of QF purchases, and maintaining the 90% / 10% sharing ratio for other purchases.

Our electric QF liability consists of unrecoverable costs associated with contracts covered under PURPA that are part of a 2002 stipulation with the MPSC and other parties. Risks / losses associated with these contracts are born by shareholders, not customers. Therefore, any mitigation of prior losses and / or benefits of liability reduction also accrue to shareholders.

This presentation includes financial information prepared in accordance with GAAP, as well as other financial measures, such as Utility Margin, Adjusted Non-GAAP pretax income, Adjusted Non-GAAP net income and Adjusted Non-GAAP Diluted EPS that are considered "non-GAAP financial measures." Generally, a non-GAAP financial measure is a numerical measure of a company's financial performance, financial position or cash flows that excludes (or includes) amounts that are included in (or excluded from) the most directly comparable measure calculated and presented in accordance with GAAP.

We define Utility Margin as Operating Revenues less fuel, purchased supply and direct transmission expense (exclusive of depreciation and depletion) as presented in our Consolidated Statements of Income. This measure differs from the GAAP definition of Gross Margin due to the exclusion of Operating and maintenance, Property and other taxes, and Depreciation and depletion expenses, which are presented separately in our Consolidated Statements of Income. A reconciliation of Utility Margin to Gross Margin, the most directly comparable GAAP measure, is included in this presentation.

Management believes that Utility Margin provides a useful measure for investors and other financial statement users to analyze our financial performance in that it excludes the effect on total revenues caused by volatility in energy costs and associated regulatory mechanisms. This information is intended to enhance an investor's overall understanding of results. Under our various state regulatory mechanisms, as detailed below, our supply costs are generally collected from customers. In addition, Utility Margin is used by us to determine whether we are collecting the appropriate amount of energy costs from customers to allow recovery of operating costs, as well as to analyze how changes in loads (due to weather, economic or other conditions), rates and other factors impact our results of operations. Our Utility Margin measure may not be comparable to that of other companies' presentations or more useful than the GAAP information provided elsewhere in this report.

Management also believes the presentation of Adjusted Non-GAAP pre-tax income, Adjusted Non-GAAP net income and Adjusted Non-GAAP Diluted EPS is more representative of normal earnings than GAAP pre-tax income, net income and EPS due to the exclusion (or inclusion) of certain impacts that are not reflective of ongoing earnings. The presentation of these non-GAAP measures is intended to supplement investors' understanding of our financial performance and not to replace other GAAP measures as an indicator of actual operating performance. Our measures may not be comparable to other companies' similarly titled measures.

Management believes that Utility Margin provides a useful measure for investors and other financial statement users to analyze our financial performance in that it excludes the effect on total revenues caused by volatility in energy costs and associated regulatory mechanisms. This information is intended to enhance an investor's overall understanding of results. Under our various state regulatory mechanisms, as detailed below, our supply costs are generally collected from customers. In addition, Utility Margin is used by us to determine whether we are collecting the appropriate amount of energy costs from customers to allow recovery of operating costs, as well as to analyze how changes in loads (due to weather, economic or other conditions), rates and other factors impact our results of operations. Our Utility Margin measure may not be comparable to that of other companies' presentations or more useful than the GAAP information provided elsewhere in this report.

The data presented in this presentation includes financial information prepared in accordance with GAAP, as well as other Non-GAAP financial measures such as Utility Margin (Revenues less Fuel, purchased supply and direct transmission expense (exclusive of depreciation and depletion)), Free Cash Flows (Cash flows from operations less maintenance capex and dividends) and Net Debt (Total debt less capital leases), that are considered "Non-GAAP financial measures." Generally, a Non-GAAP financial measure is a numerical measure of a company's financial performance, financial position or cash flows that exclude (or include) amounts that are included in (or excluded from) the most directly comparable measure calculated and presented in accordance with GAAP. The presentation of Utility Margin, Free Cash Flows and Net Debt is intended to supplement investors' understanding of our operating performance. Utility Margin is used by us to determine whether we are collecting the appropriate amount of energy costs from customers to allow recovery of operating costs. Net Debt is used by our company to determine whether we are properly levered to our Total Capitalization (Net Debt plus Equity). Our Gross Margin, Free Cash Flows and Net Debt measures may not be comparable to other companies' similarly labeled measures. Furthermore, these measures are not intended to replace measures as determined in accordance with GAAP as an indicator of operating performance.

# Delivering a **bright future**
