2014 Visitor Survey Results for LAC Indicators	255

Introduction and Background

Monitoring of recreation site conditions is reported for sites in the Missouri-Madison Corridor through the annual Recreation Site Maintenance and Management Questionnaire (also known as the Managers' Survey) as well as the Recreation Visitor Study conducted at regular intervals.

Many elements of the Managers' Survey and Recreation Visitor Study are tied directly to the Limits of Acceptable Change (LAC) indicators and thresholds established by the Missouri-Madison Comprehensive Recreation Plan (CRP). In addition, some items do not have established thresholds, but are reported for informational purposes only. For further information on LAC, refer to the Missouri-Madison Comprehensive Recreation Plan available at <https://northwesternenergy.com/recreation>.

This report is intended to provide managers with an overview of recreation site and facility conditions, as well as a synopsis of areas of concern within the Corridor based on reported conditions relative to established thresholds. This information is used to identify areas in need of management attention so that managers can develop appropriate actions with available operation and maintenance funds, through River Fund grants, or other funding sources. In many cases, management actions get underway to address needs identified in this report as a result of ongoing site maintenance prior to conditions exceeding established thresholds.

A total of 114 recreation sites are included in the annual Managers' Survey. Data was submitted for all but 2 sites for the 2022 peak recreation season (data not submitted for Missouri Headwaters State Park or Lake Helena Wildlife Management Area). A total of 54 recreation sites were included in the 2014 Recreation Visitor Study, the majority of which are along project reservoirs¹, while sites included in the Managers' Survey are along project reservoirs as well as river reaches between reservoirs.

The following report documents all site conditions as reported following the 2022 season for conditions with established standards and thresholds as well as conditions that are reported for informational purposes only. Throughout the report, conditions that exceed thresholds established in the CRP are highlighted with **red font**.

The following tables contain the adopted elements and standards for measurement under the LAC protocol. Standards for elements collected by the Managers' Survey and Visitors' Survey are both included, as are those with established thresholds and acceptable conditions as well as elements that are monitored for informational purposes only (these elements have no adopted standards or thresholds).

¹ Reservoirs associated with NorthWestern Energy's Missouri-Madison Project.

Limits of Acceptable Change Indicators and Thresholds					
Indicator	Unit of Measure	Data Source	Threshold	Acceptable Condition	Possible Management Options
Facility Repair	Monitor condition of site facility elements	Managers' Survey	Poor	Fair, Good or Very Good	More enforcement to minimize vandalism, replacement or repair, removal/closure of structures if there are public safety concerns.
Vegetative Damage	Monitor degree of vegetative damage	Managers' Survey	Moderate for undeveloped ROS only	Low for undeveloped ROS only	Public education, rotate areas out of use on a regular basis.
Shoreline Erosion	Monitor degree of human-caused soil erosion on shoreline	Managers' Survey	Moderate	Low degree	Erosion protection, public education, and rotate areas out of use on a regular basis.
Soil Compaction	Monitor soil compaction or disturbance in camping or use areas	Managers' Survey	High	Low or Moderate degree for undeveloped ROS only	Public education, rotate areas out of use on a regular basis.
Litter	Satisfaction with cleanliness of area	Visitors' Survey	Neutral/No opinion	Positive rating on -2 to +2 scale.	More intensive litter pickup or garbage collection, additional receptacles, and visitor education.
User Conflicts	"Satisfied" response to "Behavior of other people"	Visitors' Survey	Neutral/No opinion	Positive rating on -2 to +2 scale.	Work with recreating public and managers to resolve conflicts between different types of uses.
Noise	Satisfaction with number of other recreationists within sight or sound.	Visitors' Survey	Neutral/No Opinion	Positive rating on -2 to +2 scale.	Initiate quiet hours, better enforcement of existing quiet hours, prohibit animals at the site, or limit number of people allowed per camping unit.
Road Conditions	Satisfaction with condition of road within the site	Visitors' Survey	Neutral/No opinion	Positive rating on -2 to +2 scale.	Coordinate efforts to improve road conditions within and adjacent to recreation site.

Limits of Acceptable Change Indicators and Thresholds					
Indicator	Unit of Measure	Data Source	Threshold	Acceptable Condition	Possible Management Options
Use and Crowding	Perception of crowding	Visitors' Survey	6 (Moderately Crowded) for developed ROS, 3 (Slightly Crowded) for undeveloped ROS	Less than 6 for developed ROS. Less than 3 for undeveloped ROS on scale of 1 (Not at all crowded) to 9 (Extremely crowded).	Establishment of a camping reservation system, enforcement of capacity at parking areas through ticketing and/or "Site Full" signage, limits on number of people per camping site/unit, raising or instituting fees and/or different fees for different times and uses, and additional site development or acquisition of new sites.
	Satisfaction with number of other recreationists within sight or sound	Visitors' Survey	Neutral/No opinion	Positive rating on -2 to +2 scale.	

Informational Elements		
Element	Data Source	Process of Evaluation
Sanitation	Managers' Survey	Report the degree (Low, Moderate, or High) to which sanitation is a problem at the site for undeveloped ROS only.
	Visitors' Survey	Monitor visitor satisfaction with sanitation and toilet facilities at this site.
Use and Crowding	Visitors' Survey	Monitor why visitors felt crowded.
	Managers' Survey	Collect capacity use information on non-holiday summer weekends and weekdays for campgrounds, day use areas, and boat launch parking areas.
Facilities Needed	Visitors' Survey	Monitor whether visitors think additional facilities are needed at sites.
Air Quality	Visitors' Survey	Monitor satisfaction with the amount of dust on roads within recreation sites.
Road Conditions	Managers' Survey	Monitor condition of roads <u>leading to</u> and <u>within</u> site and condition of parking lots <u>within</u> site, categorized by surface type (asphalt, gravel, native surface).

Analysis Details

Site conditions are reported based on the following:

Site facility conditions are rated by managers on a five-point scale:

Very Poor ----- Poor ----- Fair ----- Good ----- Very Good

Very Poor	Completely deteriorated and/or unsafe for public use.
Poor	Very deteriorated and public safety is questionable.
Fair	Becoming deteriorated though remains safe for public use.
Good	Little sign of deterioration, stable and safe for public use.
Very Good	No sign of deterioration, new or like new, stable and safe for public use.

Other site conditions are rated by managers on a three-point scale:

No or low degree ---- Moderate degree ----- High degree

Visitor satisfaction with site conditions is rated on a five-point scale:

Very Dissatisfied		No Opinion/ Neutral		Very Satisfied
-2	1	0	+1	+2

Visitor perceptions of crowding are rated on a nine-point scale:

Not at all Crowded		Slightly Crowded		Moderately Crowded		Extremely Crowded		
1	2	3	4	5	6	7	8	9

Some LAC thresholds and acceptable conditions were established based on the level of development of the site, which is tied to the Recreation Opportunity Spectrum (ROS) designation of the sites. In these cases, the "Developed ROS" category includes those sites in the "Roaded Natural", "Roaded Modified", "Rural", and "Urban" ROS classes, while the "Undeveloped ROS" category includes sites in the "Semi-primitive Motorized", "Semi-primitive Non-motorized", and "Primitive" classes. For further information, refer to Appendix D of the Missouri-Madison Comprehensive Recreation Plan.

Summary of Current Site Conditions

The following summary highlights changes in resource and facility condition ratings that occurred between 2021 and 2022. Items listed below are ratings where conditions exceed thresholds in 2022 as established by the LAC system in the Missouri-Madison CRP, and either did not exceed thresholds in 2021 or continued to exceed thresholds in 2022.

Facility Contions:

The existng condition of various recreation site facilites were within acceptable conditions at all sites in 2022, including fishing piers, fish cleaning stations, showers, RV hookups, RV dump stations, and storage buildings.

Motorboat Launches and Carry-in Launches:

New instances of motorboat launches falling into disrepair in 2022 occurred at Causeway FAS and Earthquake Lake Boat Launch (Poor) and Spite Hill FAS (Very Poor). Ruby Creek Campground, Clute's Landing and Valley Garden FAS remained Poor. Storey Ditch, Warm Springs Creek Access, Mountain Palace, Fairweather FAS and Prewett Creek FAS all remained in Very Poor condition.

The carry-in launches at Fall Creek and Dunes FAS wer downgraded to Poor in 2022 while those at Warm Springs Creek Access, California Corner, and Milwaukee FAS remained in Poor condition.

Dock:

The dock at Kobayashi Beach was downgraded to Poor condition in 2022.

Picnic Tables and Grills:

Picnic tables at Storey Ditch were downgraded to Poor condition in 2022. Clutes Landing, Palisades Day Use Site, and French Bar tables and grills remained in Poor condition in 2022.

Campsites:

Dispersed campsites at Varney Bridge remained in Poor condition in 2022. The developed campsites at Mountain Palace and Spite Hill FAS were downgraded to Poor condition in 2022.

Toilets:

The vault toilets at Warm Springs were downgraded from Fair to Poor in 2022 and remained in Poor condition at Meriwether Picnic Site in 2022. Flush toilets at Missouri Headwaters State Park were downgraded from Fair to Poor in 2021.

Drinking Water Systems:

The drinking water system at Trapper Springs were downgraded to Very Poor in 2022 while Devil's Elbow and Clark's Bay systems reduced to a Poor rating. The Ruby Creek Campground and Log Gulch drinking water remained in Poor condition in 2022.

Swimming Areas:

Swimming Areas, Group Use Pavilions

The swimming area and the group use pavilion remained in Very Poor condition at Meriwether in 2022.

Interpretive Signs, Kiosks and Regulatory Signs:

Interpretive signs at Rainbow Reservoir Boat Launch, Beaver Creek Access Site, Raynolds Pass FAS, and Eight Mile Ford FAS remained in Poor condition in 2022, while those at Lyon's Bridge FAS remained in Very Poor condition. Wolf Creek Bridge interpretive signs were downgraded to Very Poor.

Kiosks at Wilderness Boat Launch and Red Mountain Campground went from Fair to Poor in 2022 while Ruby Creek Campground kiosks were upgraded from Poor to Fair. Palisades Day Use Site, Hauser Dam Access Site, Coulter Campground and Beaver Creek Access Site kiosks remained Poor in 2022.

Regulatory signs at Red Mountain Campground were downgraded from Fair to Poor in 2022 and those at Canaday Boat Launch remained in Poor condition in 2022.

Trails:

Trails at Riverside Campground and Holter Dam Campground remained in Poor condition in 2022.

Irrigation System:

Irrigation systems went from Poor condition to Very Poor condition at Trapper Springs and remained in Very Poor condition at Red Mountain Campground in 2022.

Administrative Building:

The administrative building at Ward Ranch was downgraded to Poor condition.

Resource Conditions:

Soil Erosion:

Soil erosion on the shoreline due to human activity was downgraded from Moderate to High Degree at Warm Springs Creek Access, White Bear Island, Mountain Palace and Spite Hill FAS in 2022, remained at a High Degree at Black Sandy State Park and Black's Ford FAS, and was downgraded from Low Degree to Moderate Degree at Kirby Day Use Area, Meadow Lake FAS, Bear Trap Canyon Trailhead Parking, Bull Pasture FAS, and Wolf Creek Bridge FAS in 2022.

Sanitation:

No new instances of Moderate or High Degree of sanitation problems were reported in 2022.

Soil Compaction:

Soil compaction in the camping and use area was downgraded to High Degree at Mountain Palace FAS in 2022, and it remained at High Degree at Black's Ford FAS, Ennis FAS, Greycliff FAS, Valley Garden FAS, Varney Bridge FAS, and Meriwether Picnic Site. Soil compaction was downgraded to Moderate Degree at Earthquake Lake Boat Launch, Spring Creek Campground, Ghost Village, Spite Hill FAS, Prewett Creek FAS, and Rainbow, Lewis & Clark, and Crooked Falls Overlooks in 2022.

Vegetative Damage:

Vegetative damage was downgraded to Moderate Degree at Spring Creek Campground, Spite Hill FAS, and Morony Dam Public Access Site in 2022 while the rating at Mountain Palace FAS was downgraded to High Degree.

Report Organization

This report provides site-specific summaries of recreation site conditions, organized by managing agency in a general upstream-to-downstream fashion. Sites in each section are organized alphabetically.

A notation exists at the top of each site-specific report if the site is a 2188 license site, or site tied to the Missouri-Madison Hydroelectric License (FERC #2188) for either ongoing operation and maintenance or some other license-based improvements.

Results for survey elements tied to the LAC indicators for sites included in the 2014 Missouri-Madison Visitor Survey are provided in the final section of the report. This information will be updated when the visitor survey is next conducted in the entire corridor.

Sanitation issues: No problems or low degree

Non-Holiday Capacity Utilization

	<u>Weekends</u>	<u>Weekdays</u>	<u>Comments</u>
Campground	98	90	2020/Covid really jumped up numbers. I'm not sure yet if these numbers will go down in 2021 but to date I'm seeing higher visitation each of the first 3 months of 21 vs 20.
Day Use Area	100	90	2020/Covid really jumped up numbers. I'm not sure yet if these numbers will go down in 2021 but to date I'm seeing higher visitation each of the first 3 months of 21 vs 20.
Boat Ramp Parking	100	100	There really isn't much parking for the boat ramp at Cherry. (Two spots) So 100% is true but a little misleading.

Additional General Comments: I moved the quality of the boat ramp down from good to fair. This was based on a number of calls I received over the summer, mostly from first time users complaining about the ramp.

Resource Conditions

Degree of Impacts

Human-caused soil erosion on the shoreline

Moderate degree

Comments: We have started planting some vegetation along shore at the confluence area. This spring plan to remove some large boulders from river which causing shoreline erosion at confluence area.

Soil compaction or disturbance beyond designated camping and use areas

Moderate degree

Comments: Due to heavy use and effects of drought, seasonal recovery of vegetation in campground areas has been impacted.

Vegetative damage beyond designated camping and use areas

Moderate degree

Comments: Increase in trail use and effects from drought we are seeing trail side impacts on vegetation. Number of user created trails in the area also on the rise.

Sanitation issues:

No problems or low degree

Comments:

Non-Holiday Capacity Utilization

	<u>Weekends</u>	<u>Weekdays</u>	<u>Comments</u>
Campground	100	95	Hoping to increase number of campsites with implementation of Master Plan currently under development.
Day Use Area	75	50	There has been a 41% increase in visitation to the park in the past two years.
Boat Ramp Parking	90	75	

Additional General Comments: We are currently undergoing a Master Plan Process and hope to finish this spring. This master plan will be used to guide us in expanding services and amenities in the park to respond to increase demand and to better protect park resources.
