

Cost-Share Proposal Form for NorthWestern Energy (NWE) Project 2188 TAC Funds

Project 2188 (Madison-Missouri River) License Protection, Mitigation and Enhancement (PM&E) projects are required to offset impacts to river resources from the continued operation of one or more of NWE's nine hydro developments (Hebgen, Madison, Hauser, Holter, Black Eagle, Rainbow, Cochrane, Ryan and Morony Dams). PM&E projects need to be prioritized toward in-river or on-the-ground measures that directly benefit fisheries and/or wildlife populations and their habitats:

Priority 1: 2188 License projects which meet License Article requirements and PM&E for fisheries or wildlife populations or their habitats within the main stem Madison River (Hebgen Reservoir to Three Forks) or Missouri River (Hauser Reservoir to Fort Peck Reservoir)

Priority 2: 2188 License projects which meet License Article requirements and PM&E for fisheries or wildlife populations or their habitats in primary tributaries or on adjacent lands and, in doing so, provide PM&E for Madison River (Hebgen Reservoir to Three Forks) or Missouri River (Hauser Reservoir to Fort Peck Reservoir) resources.

Priority 3: 2188 License PM&E projects which meet License Article requirements by providing scientific or other tangible PM&E benefits to Madison-Missouri River fisheries or wildlife populations or their habitats. These projects must be located in the greater Missouri River drainage upstream from Fort Peck Reservoir, but not necessarily located on the main stem Madison River or Missouri River or their adjacent lands or primary tributaries.

All TAC project proposals must include the following information:

Project Title: **Trumpeter Swan breeding flock restoration in the Middle Madison Valley**

Date: 10/14/2022

Explain how this Project addresses a specific Project 2188 License Article(s):

Article 423 Wildlife/habitat PM&E on Madison-Missouri Rivers, specifically "... wildlife enhancement plan that includes specific goals, objectives, and standards to enhance native plants and wildlife populations on the lands and waters associated with the project; including identification of specific protection, mitigation, and enhancement strategies for avian species."

Provide justification for Priority 1, 2 or 3 (above) that you selected: Priority 2

Our project addresses License Article 423 by restoring native trumpeter swans to their historic range. With the primary objective of this restoration work to provide nesting habitat for trumpeter swans in the O'Dell Creek Headwaters area, in hopes that they will pioneer wetlands throughout the Madison Valley where suitable nest areas are available. More specifically, in 2011 MFWP Region 3, in collaboration with the Montana Wetlands Legacy Partnership (MWLP), through its wetland restoration efforts in the Madison Valley, proposed to increase the geographic extent of the Montana trumpeter swan restoration program by beginning to release captive-reared swans in the middle Madison, starting in 2012. This broad partnership of Madison Valley landowners and federal, state, and private partners has been nationally recognized for providing quality wetland habitat that offers the potential to increase swan production in the region and to enhance connectivity between flocks breeding in the Centennial Valley, Blackfoot, and Flathead Valleys in Montana.

Location of Proposed Project: Madison Valley with primary focus on O'Dell Creek Headwaters

Narrative: Swans will be released at the Granger Ranch (primary release locations). If swans are paired at this location, a secondary release location will be the Longhorn Ranch and/or other locations close to Ennis Lake / Madison River

Lat; 45.253054 Lon: -111.730375 (Granger Ranch/O'Dell creek)
Lat; 45.415579 Lon: -111.671195 (Ennis Lake)

Total Project Cost: \$8000

TAC Funds (Cost-Share) Requested for Project: \$8000

I. Introduction; brief statement of project to be completed with pertinent background information.

Since its inception, Northwestern Energy has been a funding partner for restoration of the O'Dell Creek Headwaters wetlands and the accompanying restoration of breeding trumpeter swans in the middle Madison. Restoration of wetland habitats in this area has now provided essential breeding areas for reestablishment of breeding trumpeter swans to this portion of their historic breeding range. Releases of hand-reared, wild stock trumpeter swans has occurred for 8 of the last 10 years (no swans were released in 2018 and 2019), with 2022 being the ninth year of releases. Based on experience in the Blackfoot Valley and other parts of the Rocky Mountain trumpeters' breeding range, approximately six to eight years of releases will be needed to establish the first nesting pairs in the area. While we are not aware of any known nests, we have had reports and observed adult swans with yearling birds in spring indicating that there is successful breeding occurring up and down the valley. In 2017 we observed two adult birds (one banded as part of these efforts) with two yearlings just south of Ennis, and in 2019 and 2020 we observed an adult swan with five yearling birds on Ennis lake. In 2020 we saw an adult white bird with three yearlings on O'Dell. The fall flight of 2022 (September 27th, 2022) counted 17 swans along the Madison to Ennis Lake. This count included a pair with 2 young. This would indicate production in the valley. In spring 2022 MFWP sent an EA and proposal to the Commission for approval for 5 more years of swan releases. This was approved for 2022-2026 releases. It was met with very positive public comment and support.

II. Objectives; explicit statement(s) of what is intended to be accomplished.

Continued wetland restoration projects in the Madison serves as the basis for establishing a breeding flock of trumpeter swans in the area. The objective of this restoration effort, approved by the Montana Fish, Wildlife and Parks Commission, is to restore a breeding flock of at least five established nesting pairs in the middle Madison from Quake Lake to Ennis Lake.

III. Methods; description of how Project objectives will be accomplished.

MFWP is providing support for the Madison trumpeter swan effort through existing positions within MFWP. MFWP's Region 3 Wildlife Biologist (who also serves as the MT Pacific Flyway Study Committee Representative and the Greater Yellowstone Trumpeter Swan Working Group (GYTSWG) chair), is providing

support for this program by assisting in constructing soft release pens, obtaining neck collars and other banding materials, reporting banding data/recoveries to the USGS Banding Lab in Patuxent, Maryland, working with landowners and the public to capture and salvage injured, sick, or dead birds, giving presentations to the public, attending conferences, and in other ways. MFWP is also taking a lead role in raising additional funds and securing additional partnerships from other sources including; Montana Audubon, the Sacagawea Chapter of the Montana Audubon, Montana Outdoor Legacy Foundation, and from private individuals.

Northwestern Energy (NWE) has provided between \$5,000 -\$8,000 per year depending on projects needs and funding from other sources. These funds are generally used to obtain birds for release from Wyoming Wetlands Society, as well as providing additional operations support for releases. We also conduct a spring flight in early June to evaluate possible nesting and to increase monitoring efforts to gauge the success of the program. We feel that we are now at a critical time in this work where nesting is possible and we would like to be able to report possible nesting attempts, and if possible, the number of young produced. Consultation with Bill Long, director, Wyoming Wetlands Society (WWS), indicates that this flight should be conducted annually. The WWS funded this flight in 2016, and NWE funded the flight, annually, from 2017 to 2022. We hope to continue with an annual spring flight thus funds are being requested in this proposal to NWE and are reflected in the budget.

In 2018 and 2019 there were a limited number of cygnets available from Wyoming Wetlands Society for project releases. Discussions with project leads, decided to maximize the number of cygnets available to two other projects (Yellowstone National Park and the Blackfoot Project) as these projects have time sensitive release dates, and/or are coming to completion of the project. Because Middle Madison did not get birds 2019, we were top of the allocation in 2020-2022 receiving 4-5 cygnets annually. Production at WWS is increasing so we are confident we will receive cygnets in 2023. As discussed at the NWE TAC team meeting last winter, the efforts of the Middle Madison stretch beyond just Montana but are critical at a Flyway project wide level.

Also, in 2019, 2020 and 2021 we deployed GPS/GSM collars on trumpeter swans in the Middle Madison each year. These birds are caught during molting in the summer and implemented with the device which help to describe habitat use, migration paths, and will be used to facilitate future restoration work. These devices store locations and download to cell towers every 10-30 minutes. They are solar paneled so will hopefully last the life of the bird. In 2019 and 2020 these devices were funded by Wyoming Wetlands Society, but in 2021 they were funded as part of a larger USGS / USFWS project, with in-kind support from MFWP (Claire Gower) to locate molting birds prior to capture efforts. Our goal is to deploy more in the coming years (devices have also been deployed in the Blackfoot valley and most recently the Paradise Valley).

Every time we handle a wild bird, we take feathers and send them to our collaborators within the Pacific Flyway so that isotope analyses can be done to determine their origin. This work is being conducted by the USFWS – USGS with in-kind support from MFWP (Claire Gower) and biologists from Freezout Lake WMA (Brent Lonner). This is also being done in OR, ID, UT and NV. This further exemplifies the breadth of this work.

Because the project has expanded since its inception, we are seeking additional funds which will be used to facilitate more monitoring and travel for the different components. With more birds on the ground, MFWP is conducting more spring, and summer monitoring to look for bands of birds anywhere from Henry's Lake to Ennis Lake, and the Ruby valley to determine if these birds are dispersing birds from the restoration flock. We are also spending more time in the summer to locate and catch molting birds for GSM collar deployment. We would use these funds to assist with intern time. Last year we purchased better-quality optics for this increased monitoring work and locating birds.

MFWP will continue to work with funding partners to solicit donations for obtaining swans for the 2023 release and beyond as needed.

IV. Schedule; when the Project work will begin and end.

Project planning, coordination, authorization from Pacific Flyway Council and others is ongoing.

V. Personnel; who will do the work ? Identify Project leader or principal investigator.

VI. Project budget must include amounts for the following:

Direct Labor	0
Travel and Living	1000
Materials	2000
Other Direct Expenses	5000
Direct Overhead*	0

All cost-share sources and amounts, including estimation of “in-kind” contributions

\$2,000 FWP staff time contributions to the project - Native Species Program – Region 3*

\$1,000 In-Kind contribution - Bill Long, Wyoming Wetlands Society**

\$1,000-1,500 has in the past been provided by MT and Sacajawea Audubon -we are unsure if these funds will be available this year, but we are currently working to secure additional match commitments for this year.

*~ 16 days / 128 hours full time biologist salary dedicated to swan restoration – meetings for restoration approval, constructing and taking down soft release pen, collecting and releasing swans, follow up monitoring and database management, project reporting and project product/presentation development and delivery. EA preparation and approval (2022). Also, Pacific Flyway and Greater Yellowstone Trumpeter Swan working Group attendance and coordination.

** ~4 days to conduct disease testing and time to transport swans (WWS).

** expenses associated with disease testing prior to releasing swans incurred by the WWS

*/ **Travel time to and from field site, transport of birds up, disease testing, project coordination and facilitation, project reporting, meetings and Pacific Flyway involvement.

***NorthWestern Energy TAC funds will not be used for agency overhead on projects that do not fund personnel. Applications for materials and equipment should not contain overhead.**

VII. Deliverables; describe work product (reports, habitat restoration, etc.) which will result from this Project. How will “success” for this project be monitored or demonstrated?

Continued release of trumpeter swans in 2023, tracking of birds and recording locations/maintaining data records, securing markers and reported bandings to Bird Banding Lab by the end of the year. MFWP will also

provide an annual report update before the 2021 Wildlife TAC Meeting. A PowerPoint presentation will also be given at the annual TAC team meeting. Presentations have been given to the Ruby Watershed Group and Sacajawea Chapter Montana Audubon. MFWP may attend the 25th International swan symposium in Jackson WY October 2022 to share results of this work. We will use the spring flights (described above) to gauge project success.

VIII. Cultural Resources. Cultural Resource Management (CRM) requirements for any activity related to this Project must be completed and documented to NWE as a condition of any TAC grant. TAC funds may not be used for any land-disturbing activity, or the modification, renovation, or removal of any buildings or structures until the CRM consultation process has been completed. Agency applicants must submit a copy of the proposed project to a designated Cultural Resource Specialist for their agency. Private parties or non-governmental organizations are encouraged to submit a copy of their proposed project to a CRM consultant they may have employed. Private parties and non-governmental organizations may also contact the NWE representative for further information or assistance. Applications submitted without this section completed, will be held by the TAC, without any action, until the information has been submitted.

Summarize here how you will complete requirements for Cultural Resource Management:

Due diligence, including MEPA and NEPA compliance, requires consulting cultural resource professionals for all projects involving public funds. Cultural resource professionals within the sponsoring agencies or with the MT SHPO office will conduct cultural resource inventories on this project. Sponsoring entities will ensure that these surveys are conducted and results reported in advance of initiating this project. Northwestern Energy's cultural resource consultants will also be involved as required by the company.

IX. Water Rights. For projects that involve development, restoration or enhancement of wetlands, please describe how the project will comply with the intent of Montana water rights laws and policies and with NWE's water rights guidelines for wetland projects.

Summarize here how you will comply with Montana and NWE water rights laws, policies and guidelines:

Not applicable

All TAC Project proposals should be 7 pages or less and emailed (as a WORD file) to each of:

- Andrew.Welch@NorthWestern.com
- Jon.Hanson@Northwestern.com
- Grant.Grisak@Northwestern.com
